2

Finding MIT on the Internet

Slides adapted from S. Lisanti, MIT

3

Overview

Q: Why have a search engine strategy?

A: 85% of web traffic comes from search engines.

4

Meta tags

Q: True or false? To get a top ranking in search engines, all you need to do is to add "meta tags" to your web pages.

A: False

5

Types of search engines

- Internet search engines such as Google, Yahoo, Inktomi, Ask Jeeves, MSN
- Meta search engines such as Search.com
- Local search engines, MIT-wide or site-wide

6

Top Yahoo search terms (4/27/04)

Leaders					Movers

9

Search engine advertising

- Fundamentally different from banner ads, since the searcher is not passively observing banners while reading news.
- The searcher is actively seeking information and may be in the process of locating a product or service for purchase.
- Thus, the search engine prospect is better qualified than the banner clicker.

10

Cost per click

- The average cost-per-click (CPC) is 29 cents, even as rumors proliferate about \$7 CPCs on popular keywords such as “casino.”
- For direct marketers, 29 cents converts to \$290 per thousand, which is a respectable rate for collecting interested prospects.

11

SEO: What is PageRank?

- PageRank is a numeric value that represents how important a page is on the web.
- Google figures that when one page links to another page, it is effectively **casting a vote** for the other page. The more votes that are cast for a page, the more important the page must be.
- The importance of the page casting the vote determines how important the vote itself is. Google calculates a page's importance from the votes cast for it.

12

Writing for the web

- Headlines
 - Fire Your Biggest Gun First. There is no point in holding back the greatest benefit until half way down the page.

13

Writing for the web

- Have Relevant Content
- Smaller pages are better than larger ones because it is easier to target a search term when there is less text on the page to dilute the focus. Matching search terms to a page's content is essential.
 - Suitable pages are best though
- Use HTML instead of graphics whenever possible
- Include links

14

Keywords

- Pick Your **Target** Keywords.
 - Each page in your web site will have different target keywords that reflect the page's content.
- Position Your Keywords.
 - Use your target keywords for your page headline, if possible. Have them also appear in the first paragraphs of your web page.

New center to study impact of ocean pathogens on human health

APRIL 23, 2004

MORE INFORMATION:

- ▶ [Martin Polz](#) - MIT Dept. of Civil and Environmental Engineering
- ▶ [Polz Lab projects](#) - MIT
- ▶ [Woods Hole Oceanographic Institution](#)
- ▶ [Marine Biological Laboratory](#)

Scientists from MIT and two other institutions have joined together to create a new center for research on issues involving oceanographic, biological and environmental health sciences.

MIT will join the Woods Hole Oceanographic Institution (WHOI) and Marine Biological Laboratory, both in Woods Hole, Mass., to form the Woods Hole Center for Ocean and Human Health (COHH), based at WHOI. MIT Associate Professor Martin Polz, who develops molecular approaches to understanding marine and aquatic ecosystems, will coordinate MIT research for the new center.

"The Woods Hole center is an important step forward in addressing the ongoing but poorly understood deterioration of coastal ecosystems and its effects on human health," said Polz. "It unites a number of researchers from different disciplines to focus on some of the most important existing and future problems caused by infectious and harmful biological agents."

The Woods Hole COHH is one of four being established with funding from the National Science Foundation and the National Institute of Environmental Health Sciences, one of the National Institutes of Health. The other three Centers for Ocean and Human Health will be located at the University of Miami, the University of Hawaii, and the University of Washington (Seattle). The federal agencies expect to invest a combined total of \$25 million over a five-year period to support the four centers.
