New Digital Media

Sixth Sense in 21st Century

Dr. Pattie Maes,
Massachusetts Institute of Technology
(MIT), United States

Broadcast in TED

TED
TALKS

1

Sixth Sense

- A wearable gestural interface that augments the physical world around us with digital information
- Let us use natural hand gestures to interact with that information
- The SixthSense prototype is comprised of a pocket projector, a mirror and a camera.

Detail of Sixth Sense

- The device recognizes items in stores, and then gathers and projects information about products to the user.
- It also is able to provide quick signals to let users know what the best products are based on their needs.”
- Recognize articles in newspapers, retrieve the latest related stories or video from the Internet and then display them on pages for the user

Cost of Sixth Sense

- Only 350 US dollars
- From an educator’s stand point, this is minimum given the amount of money spent on textbooks, computer labs and LCD projectors.
- For educator’s, Sixth Sense would be a way to put technology (literally) into each student’s hands, because of its size and its cost.

Touch Communication

A blue fancy robotic bear was designed to relieve pain for kids in the Wired Magazine [Fall15a].

Smell Communication

A smell-based system called Dollars & Scents inside the entrance to their laboratory at MIT

- The system releases scents and perfumes into the air differently depending on stock market changes.
- Emit a lemon-like fragrance if NASDAQ index is going down, while they emit a rose-like fragrance if the stock market is going up.
- Similarly, they also built an olfaction system, called inStink, for conveying ambient presence and activity awareness for food.

Taste Communication

The Food Media's system configuration is set up by [Wei13a] from National University of Singapore.

Integration leads to Innovation

11

Integration AR with Music

3

Integration AR with Music for entertaining and helping people

Touch Communication

From Huggy Pajama to T-Jacket

4

<http://mixedrealitylab.org/>

T-Jacket

Wearing T-Jacket for Touch communication

- Controlled by my smartphone (iPhone) using Bluetooth
- Charged by a normal voltage
- Mobilities

Integrating T-Jacket with Visual

5

Examples of our integrated system between touch and visual communications using a built cardboard headset

Integrating T-Jacket with Baby Camera Device

6

Examples of an integrated system between T-Jacket and a baby camera device for assisting people

Conclusion

- New Digital Media
- Five Senses Communication by Integration
- Touch Technology

Thank you
