

CM 7028 Digital Media Production

Chutisant Kerdvibulvech, Ph.D.
Assistant Professor

ผศ.ดร.ชุตินันต์ เกติวิบูลย์เวช

นน 7028 การผลิตสื่อดิจิทัล

L3

INSTRUCTOR

Asst. Prof. Dr. Chutisant Kerdvibulvech

ผศ.ดร.ชุตินันต์ เกติวิบูลย์เวช

- Email: chutisant.ker@nida.ac.th
 - Website: www.gscm.nida.ac.th/~chutisant/
 - Facebook: <https://www.facebook.com/chutisant.kerdvibulvech>
 - Office: 18th Floor of Navamindradhiraj Building
 - Office Hour: Mon 13.00-16.00
- (Please Email/Facebook me first to make sure that I will be there.)

Introduction to Computer Vision

Vision

- Vision is the process of discovering what is present in the world and where it is by looking.

5

Asst. Prof. Dr. Chutisant Kerdvibulvech

Computer Vision

- **“Computer vision** is the science and technology of machines that see. As a scientific discipline, computer vision is concerned with the theory behind artificial systems that extract information from images. The image data can take many forms, such as video sequences, views from multiple cameras, or multi-dimensional data from a medical scanner.”

By Dana H. Ballard, Computer Vision.

6

Asst. Prof. Dr. Chutisant Kerdvibulvech

Computer Vision

- Computer Vision is the study of analysis of pictures and videos in order to achieve results similar to those as by men.

7

Asst. Prof. Dr. Chutisant Kerdvibulvech

Introduction of Computer Vision

- Digital Image Processing (IP)
 - Since 1960's
 - 1970's : Recognized as a technology for practical use.
 - Most Important Issues : Image Transformation
 - Noise/Blur Compensation, Distortion Correction

8

Asst. Prof. Dr. Chutisant Kerdvibulvech

Introduction of Computer Vision

- Computer Vision (CV)
 - Emerged from AI (Artificial Intelligence) Research
 - Computational Vision proposed by Marr
 - Shape from X(X:shading, texture, contour, motion...etc.)
 - 3D Scene Understanding from 2D images
 - Robot Vision: Vision functionality for Robots
 - Media Processing, Human Interface

9

Asst. Prof. Dr. Chutisant Kerdvibulvech

Image Processing / Computer Vision

10

Asst. Prof. Dr. Chutisant Kerdvibulvech

Computer Vision

What we see

0	3	2	5	4	7	6	9	8
3	0	1	2	3	4	5	6	7
2	1	0	3	2	5	4	7	6
5	2	3	0	1	2	3	4	5
4	3	2	1	0	3	2	5	4
7	4	5	2	3	0	1	2	3
6	5	4	3	2	1	0	3	2
9	6	7	4	5	2	3	0	1
8	7	6	5	4	3	2	1	0

What a computer sees

11

Asst. Prof. Dr. Chutisant Kerdvibulvech

Components of a Computer Vision System

12

Asst. Prof. Dr. Chutisant Kerdvibulvech

Example

Finding People in images

Problem 1: Given an image I

Question: Does I contain an image of a person?

13

Asst. Prof. Dr. Chutisant Kerdvibulvech

“Yes” Instances

14

Asst. Prof. Dr. Chutisant Kerdvibulvech

“No” Instances

15

Asst. Prof. Dr. Chutisant Kerdvibulvech

Recent Computer Vision Applications

Picture Collage

By Dr. Jian Sun
Visual Computing Group,
Microsoft Research Asia (MSRA)

What's Picture Collage?

- Inputs:

- How to arrange a set of images on a given canvas?

18

Asst. Prof. Dr. Chutisant Kerdvibulvech

Mosaic Collage

19

Asst. Prof. Dr. Chutisant Kerdvibulvech

Google's Picasa Collage

20

Asst. Prof. Dr. Chutisant Kerdvibulvech

Our Picture Collage

21

Asst. Prof. Dr. Chutisant Kerdvibulvech

Picture Collage

- A “visual” image summarization
 - Efficiently view a set of images
 - Maximizing visible visual information
- For image browsing, printing, and sharing
 - Causally images arrangement is easy by **hand**
 - But it is difficult to the user by **mouse**

Learning Realistic Human Actions from Movies

By Dr. Ivan Laptev

INRIA Paris, France

Institut national de recherche en informatique
et en automatique

Learning Realistic Human Actions from Movies

- The aim of this paper is to address recognition of natural human actions in diverse and realistic video settings.
- This challenging but important subject has mostly been ignored in the past due to several problems one of which is the lack of realistic and annotated video datasets.

29

Asst. Prof. Dr. Chutisant Kerdvibulvech

Learning Realistic Human Actions from Movies

- Their first contribution is to address this limitation and to investigate the use of movie scripts for automatic annotation of human actions in videos.
- They evaluate alternative methods for action retrieval from scripts and show benefits of a text-based classifier.

30

Asst. Prof. Dr. Chutisant Kerdvibulvech

Learning Realistic Human Actions from Movies

- Using the retrieved action samples for visual learning, we next turn to the problem of action classification in video.
- They present a new method for video classification that builds upon and extends several recent ideas including local space-time features, space-time pyramids and multi-channel non-linear SVMs.

31

Asst. Prof. Dr. Chutisant Kerdvibulvech

Asst. Prof. Dr. Chutisant Kerdvibulvech

Flash Matting

By Dr. Jian Sun
Visual Computing Group,
Microsoft Research Asia (MSRA)

Flash Matting

- In this paper, they propose a novel approach to extract mattes using a pair of flash/no-flash images.
- Their approach, which they call flash matting, was inspired by the simple observation that the most noticeable difference between the flash and no-flash images is the foreground object if the background scene is sufficiently distant.

- Flash matting results for flower scene with complex foreground and background color distributions.
- From left to right: flash image, no-flash image, recovered alpha matte, and flower basket with new background.

35

Asst. Prof. Dr. Chutisant Kerdvibulvech

Method of Flash Matting

- They apply a new matting algorithm called joint Bayesian flash matting to robustly recover the matte from flash/no-flash images.
- Even for scenes in which the foreground and the background are similar or the background is complex

36

Asst. Prof. Dr. Chutisant Kerdvibulvech

Asst. Prof. Dr. Chutisant Kerdvibulvech

Drag-and-Drop Pasting

By Dr. Jian Sun
Visual Computing Group,
Microsoft Research Asia (MSRA)

- Given a source image (a), the user draws a boundary that circles the wood log and its shadow in the water, and drags and drops this region of interest onto the target image in (b).
- The result from Poisson image editing (c) is however not satisfactory. Structures in this target image (e.g., the dark beach) intersect the source region boundary, thus produce unnatural blurring after solving the Poisson equations.
- Their approach, called *drag-and-drop pasting*, computes an optimized boundary shown in (d), which is then used to generate a seamless image composite (e).

39

Asst. Prof. Dr. Chutisant Kerdvibulvech

Video result

Drag-and-Drop Pasting

Recent Sketching Interface Applications in CG

Dr. Takeo Igarashi,
University of Tokyo, Japan

Teddy: A Sketching Interface for 3D Freeform Design

- By Dr. Takeo Igarashi, University of Tokyo, Japan
- Teddy is a sketch-based 3D modeling software.
You can make interesting 3D models just by drawing
freeform strokes.

42

Asst. Prof. Dr. Chutisant Kerdvibulvech

Teddy (cont.)

- Teddy requires Java installed in your machine, and mainly designed for Windows.
- Commercial Products based on Teddy: PC package , GameCube game , PlayStation2 game

9

Dr. Takeo Igarashi,
University of Tokyo

43

Asst. Prof. Dr. Chutisant Kerdvibulvech

Human Detection

Dr. William R. Schwartz,
University of Maryland, United States

Human Detection

- Human Detection Using Partial Least Squares Analysis
- Detect the pedestrians robustly

12
Dr. William R. Schwartz,
University of Maryland,
United States
