Digital Media Trends for 2014

Active monthly users of the 'big 9'

As at 15 November 2013 (multiple sources cited)
*Tumblr does not release active monthly user data and this figure is based on an estimate from Twitter's website (see 8. discussion). Twitter's stated maximum capacity is 100m only per month.

Augmented Reality vs. Virtual Reality

Augmented Reality

- System augments the real world scene
- User maintains a sense of presence in real world
- Needs a mechanism to combine virtual and real worlds

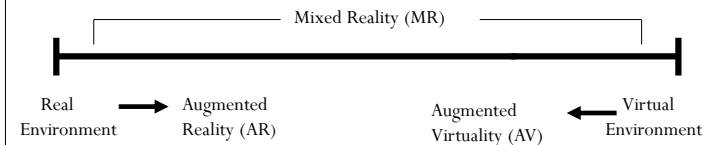

Virtual Reality:

- Totally immersive environment
- Visual senses are under control of system

Miligram's Reality-Virtuality Continuum

csis.pace.edu

Miligram coined the term "Augmented Virtuality" to identify systems which are mostly synthetic with some real world imagery added such as texture mapping video onto virtual objects.

Augmented Reality is closest to the real world because mainly a user is perceiving the real world with just a little computer generated data.
